Transmission of Resistance Sensor Signals over Multi-Wire Line with Losses

A. Penin and A. Sidorenko

Ghitu Institute of Electronic Engineering and Nanotechnologies, Academy of Sciences of Moldova, Chisinau, Moldova Republic

The invariant relationship between the sets of load conductivity values at the output of the four wire DC communication line and the corresponding current values at the input of this line is shown. This relationship does not depend on accuracy of measuring devices. It allows transmitting signals over these wire communication line.
