**Patent no.**

Patent MD 3544

**Description**

The invention refers to the domain of conversion plant for the eolian energy in electric energy. The blades in normal section have are described by logarithmic curve. The concave part of the blades is oriented according to the direction of the traffic. The increase of the coefficient of wind energy utilization is provided by additional injection of air-mass. The proposed eolian turbine will be used in small power wind units for private consumers.
