<b>Title</b>	Raspberry pruning method in the first year after planting
<b>Authors</b>	<b>Balan Valerian, Dodica Dumitru, Șarban Vasilie, Guci Ivan, Pompuș Irina</b>
<b>Institution</b>	<b>State Agrararian University of Moldova</b>
<b>Patent no.</b>	Nr. 1443 din 2020.07.31
<b>Description</b>	The invention relates to the agriculture, in particular, to fruit growing (pomology), and namely to a raspberry pruning method in the first year after planting. According to the invention, the method includes pruning the stem of the parent plant at the level of the roots, when the newly formed suckers reach the height of 10-15 cm.
<b>EN</b>	The technical result of the invention allows to increase the survival rate of raspberry plants and the formation of well-developed suckers, which ensure the next year's harvest.
<b>Class no.</b>	3. Agriculture and Food Industry
