

**S4-P.10****Restoringn Spatial Phase Distribution of Complex Optical Fields for Biomedicine Application**

C. Yu. Zenkova, P. A. Riabyi and D. I. Ivanskiy

*Optics, Printing & Publishing Department, Chernivtsy National University, Chernivtsy, Ukraine*

The paper presents principal approaches to diagnosing the structure forming skeleton of the complex optical field. It is shown that intensity distribution smoothing and bicubic spline simulation allow to bring much closer the solution of the phase problem of localization speckle-field special points.
